HowTo Implementing a Key Service Operation Process Incident Management

Lets take Incident Management as an example A robust incident management process typically follows these steps

- 1 Incident Detection Identifying the incident eg system outage reported by users
- 2 Incident Logging Recording the incident in an incident management system eg ServiceNow Jira
- 3 Incident Categorization and Prioritization Classifying the incident based on its impact and 3 urgency
- 4 Incident Diagnosis and Resolution Investigating the root cause and implementing a fix
- 5 Incident Closure Verifying the resolution and closing the incident
- 6 PostIncident Review Analyzing the incident to identify areas for improvement

Visual A simple flowchart illustrating these steps would be beneficial here Consider a free tool like drawio to create a basic flowchart

Example The Case of the Downtime Database

Imagine your companys database goes down This triggers multiple incidents Your team follows the incident management process they log the incident categorize it as a high priority outage diagnose the issue a corrupted file resolve it by restoring from a backup and close the incident Postincident review reveals a need for more frequent backups and a more robust monitoring system
