the roadside design guide presents a synthesis of current information and operating practices related to roadside safety and is written in dual units metric and u s customary this book is a guide it is not a standard nor is it a design policy it is intended to use as a resource document from which individual highway agencies can develop standards and policies although much of the material in the guide can be considered universal in its application several recommendations are subjective in nature and may need modification to fit local conditions however it is important that significant deviations from the guide be based on operational experience and objective analysis the 2011 edition of the aashto roadside design guide has been updated to include hardware that has met the evaluation criteria contained in the national cooperative highway research program nchrp report 350 recommended procedures for the safety performance evaluation of highway features and begins to detail the most current evaluation criteria contained under the manual for assessing safety hardware 2009 mash for the most part roadside hardware tested and accepted under older guidelines that are no longer applicable has not been excluded in this edition aashto website

context sensitive solutions css reflect the need to consider highway projects as more than just transportation facilities depending on how highway projects are integrated into the community they can have far reaching impacts beyond their traffic or transportation function css is a comprehensive process that brings stakeholders together in a positive proactive environment to develop projects that not only meet transportation needs but also improve or enhance the community achieving a flexible context sensitive design solution requires designers to fully understand the reasons behind the processes design values and design procedures that are used this aashto guide shows highway designers how to think flexibly how to recognize the many choices and options they have and how to arrive at the best solution for the particular situation or context it also strives to emphasize that flexible design does not necessarily entail a fundamentally new design process but that it can be integrated into the existing transportation culture this publication represents a major step toward institutionalizing css into state transportation departments and other agencies charged with transportation project development

this review book has all the problems and solutions you need to review for the transportation engineering portion of the professional engineer pe exam for civil engineering this is for engineers planning to take the civil engineering peexam in transportation the chapters are taken from the civil engineering license review and civil engineering

license problems and solutions the review book contains the complete review of the topics and includes example questions with step by step solutions and end of chapter practice problems also featured is information from the latest codes 1998 highway capacity manual there are 15 problems with complete step by step solutions

this volume is a study guide for the civil engineer taking the pe exam solved problems throughout each chapter reinforce the concepts discussed in the text

crash data show that more than 18 000 traffic fatalities per year result from roadway departures and over 7 000 of those roadway departure crashes involved collisions with roadside fixed objects the trb national cooperative highway research program's nchrp only document 336 proposed guidelines for fixed objects in the roadside design guide helps develop an evaluation methodology and design guidance for use by engineering practitioners to quantify the relative risk of collisions with roadside fixed objects the document is supplemental to nchrp research report 1016 design guidelines for mitigating collisions with trees and utility poles

a replacement to the publication entitled highway design and operational practices related to highway safety also known as the yellow book and most recently published in 1974

this report completes and updates the first edition of nchrp report 600 human factors guidelines for road systems hfg which was published previously in three collections the hfg contains guidelines that provide human factors principles and findings for consideration by and is a resource document for highway designers traffic engineers and other safety practitioners foreword

in 1960 it was observed that approximately 30 to 35 of highway fatalities occur in runoff road collisions a statistic that has remained remarkably constant through the present day the trb national cooperative highway research program's nchrp research report 972 development of safety performance based guidelines for the roadside design guide provides quantitative safety performance guidance rather than implicit guidance which will more effectively communicate design objectives and performance goals and quantify improvements to safety this change is complementary to the performance based practical design approach being promoted by the u s federal highway

administration as well as the ongoing efforts to add performance based design measures to the geometric design process as documented in nchrp report 785 performance based analysis of geometric design of highways and streets supplemental to the report are four appendices appendix a roadside risk workbook appendix b derivations appendix c serious and fatal injury crash tables and appendix d research needs and knowledge gaps

this guide replaces the 1984 publication entitled an informational guide for roadway lighting it has been revised and brought up to date to reflect current practices in roadway lighting the guide provides a general overview of lighting systems from the point of view of the transportation departments and recommends minimum levels of quality the guide incorporates the illuminance and luminance design methods but does not include the small target visibility stv method
