this book introduces the electromagnetic compatibility emc of electric vehicle ev including emc of the whole vehicle electromagnetic interference emi prediction and suppression of motor drive system emi prediction and suppression of dc dc converter electromagnetic field safety and emc of wireless charging system signal integrity and emc of the vehicle controller unit vcu emc of battery management system bms electromagnetic radiated emission diagnosis and suppression of the whole vehicle etc the analysis method modeling and simulation method test method and rectification method of emc are demonstrated the simulation and experimental results are presented as tables and figures this book is useful as reference for graduate students senior undergraduates and engineering technicians of vehicle engineering related majors for emi prediction suppression and emc optimization design for evs this book provides reference for engineers to solve emc problems this book is intended for senior undergraduates postgraduates lecturers and laboratory researchers engaged in electric vehicle and electromagnetic compatibility research

the objectives of the handbook are 1 to collect diverse sources of information unique to combat and tactical vehicles in order to conserve time materials and money in the successful design of new equipment 2 to provide guidance in capsule form for new personnel armed forces contractors or experienced design engineers in other fields who require information about vehicle electrical systems 3 to supply current fundamental information and 4 to place the reader in a position to use new information generated subsequent to the publication of this handbook to meet these objectives the handbook has been written to provide

the necessary background regarding electrical equipment and systems so that more complete information and data available in the references can be used
