the first german edition of this book appeared in 1940 since then the book has gone through five more editions and has been translated into spanish and italian the present english translation is based on the sixth german edition the author was professor of economics at the university of freiburg germany professor eucken was a student at a time when the historical school dominated the teaching of economics at the german universities although at the beginning of his career he did some work along the lines of the historical school neither the aims nor the methods of historical research the field of economics as practised by the representatives in of the historical school satisfied him and the fact that the members of this school were unable to explain the causes of economic events such as the german inflation after world war i was an added reason for him to turn to economic theory he became among german economists the foremost opponent of the historical school which he criticised in several publications through his writings and his teaching he contributed his share to the revival of interest in economic theory which was noticeable in the twenties and he was one of the few economists left in germany who helped to keep this interest alive during the thirties and during world war ii during this time he published

kapitaltheoretische untersuchungen 1936 and the present volume which immediately gave rise to an extensive discussion in german economic journals

it is widely recognised that mainstream economics has failed to translate micro consistently into macro economics and to provide endogenous explanations for the continual changes in the economic system since the early 1980s a growing number of economists have been trying to provide answers to these two key questions by applying an evolutionary approach this new departure has yielded a rich literature with enormous variety but the unifying principles connecting the various ideas and views presented are as yet not apparent this 2005 volume brings together fifteen original articles from scholars each of whom has made a significant contribution to the field in their common effort to reconstruct economics as an evolutionary science using meso economics as an analytical entity to bridge micro and macro economics as well as static and dynamic realms a unified economic theory emerges

walter eucken s the foundations of economics grundlagen der national konomie is the classic work of german economic literature in the past 60 years in particular the book was of great importance for the economic order that developed in the federal republic of germany after the second world war and made germany the leading economic power in europe eucken places great emphasis on economic reality in his work taking everyday observations as his starting point he attempts to infer complex connections eucken provides the reader not only with a comprehensive criticism of classical economics but also in particular with an analysis of economic systems economic order and the course of economic events as a consequence of the dramatic changes that have taken place in eastern europe many states now find themselves facing problems similar to those faced by west germany in its earliest days euckens considerations can be of assistance in the search for the correct concepts this reprint of the english translation of euckens book thus not only gives a broad readership renewed access to a classical work but can be instrumental in supporting the transition to a market economy in many countries and in facilitating the search for good concepts

Ôthis book is an ambitious intellectual enterprise to build a naturalistic foundation for economics with amazingly vast knowledge of physical biological social sciences and

philosophy readers will discover that approaches and insights emergent in institutional studies social neuroscience network theory ecological economics bio culture dualistic evolution etc are persuasively placed in a grand unified frame it is written in a good hayekian tradition i recommend this book particularly to young readers who aspire to go beyond a narrowly specified discipline in the age of expanding communicability of knowledge and ideas

Ô ð masahiko aoki stanford university us

Ô carsten herrmann pillathÔs new book is an in depth application of natural philosophy to economics that draws up an entirely new framework for economic analysis it offers path breaking insights on the interactions between human economic activity and nature and outlines a convincing solution to the long standing reductionism controversy a must read for everyone interested in the philosophical underpinnings of economics as a science

Ô ð ulrich witt max planck institute of economics jena germany

Ôbig pictureÓ philosophy of economics drifted into a dull cul de sac as it became obsessively focused on falsifiability and rationality in this book carsten herrmann pilath pushes the field back onto the open highway by locating economics in the larger frameworks of metaphysics evolutionary dynamics and information theory this is large scale ambitious synthesis of ideas of the kind we expect from time to time to see devoted to physics and biology why should economics merit anything less but of course this kind of intellectual tapestry must await the appearance of an unusually devoted scholar with special patience and eccentric independence from the pressure for quick returns that characterizes academic life in the person of hermann pilath this scholar has appeared no one who wants to examine economics whole and in its richest context should miss his virtuoso performance in this book

Ô ð don ross university of cape town south africa and georgia state university us

Ô herrmann pillathÔs work attempts to bring to bear upon the discipline of economics perspectives from other discourses which have been burgeoning recently ð namely thermodynamics evolutionary biology and semiotics aiming at a consilience contextualized by economic activity and problems this marks the work as a contemporary example of natural philosophy which is now at the doorstep of a revival the overall perspective is that human economic activity is an aspect of the ecology of the earthÔs surface viewing it as an evolving physical system mediated through distributed mentality as expressed in technology evolution knowledge is taken to be ÔphysicalÔ with a performative function as in peirceÔs pragmatism thus the social

meanings of expectations prices and credit are found to be rooted in energy flows the work draws its foundation from hegel and c s peirce and its immediate guidance from hayek veblen and georescu roegen the author generates an energetic theory of economic growth guided by odum's maximum power principle economic discourse itself is reworked in the final chapter in light of the examinations of the previous chapters naturalizing economics within an extremely powerful contemporary framework

It's hard to know which to praise first carsten herrmann pillath's humility or his ambition he says his book is not a great intellectual feat because he pursues the humble task of putting together the ideas of others when he finally gets to economics he tries to be as simple as possible and to conceive of economics in terms of the basics at undergraduate level so to say on the other hand the scale of his ambition is to rethink the foundations of economics from first principles while at the same time holding a running dialogue between contemporary sciences and classic philosophy he's much too modest of course because foundations is a major achievement but his modesty points to what makes it such a powerful treatise the book is not about his preferences or prejudices it is a scientific approach that aims at establishing truthful propositions about reality that is much harder to achieve than grand theories or complicated mathematics because it amounts to a new modern synthesis of the field an achievement on a par with julian huxley's whose own modern synthesis of evolutionary theories in the 1940s allowed for the explosive growth of the biosciences over the next decades the structure of the book is simple enough providing a framework for the naturalistic turn in economics starting from material existence causation and evolution herrmann pillath takes us through four fundamental concepts individuals networks institutions and technology before coming finally to the realm of economics proper i.e. markets however herrmann pillath believes that the foundations of economics cannot be found within economics but only in dialogue with other sciences or what he calls the theatre of consilience it's a theatre in which various characters come and go where dialogue ebbs and flows conflicts arise and are resolved and where individual actions can be seen as concepts as leading to higher levels of meaning as the plot unfolds the magic of theatre of course is that the point of intelligibility where the characters actions and narrative

resolve into meaningfulness is projected out of the drama itself into the spectator that's you dear reader so it is with economics as a discipline economics is a player in a much larger performance about what constitutes knowledge and how we know that it is also a player in the economy it seeks to explain to understand why money firms growth prices markets and other staples of economic thought emerge and function the way they do it is necessary situate the analysis beyond economics and the economy and to engage with developments across the human evolutionary and complexity sciences this is what herrmann pillath does analyzing a breathtaking range of illuminating and sometimes challenging work along the way we are treated to new ideas about the externalized brain the evolution of knowledge in the earth system i e not just among humans the role of signs and performativity in these processes as well as that of òenergetic transformations Ó but herrmann pillath is not satisfied with the òmodestÓ task of bringing the best of modern scientific thought to bear on economic concepts and performances he really does harbor a deeper purpose the clue is in his apparently quixotic desire to hang on to philosophical insights associated with pre evolutionary thinkers like aristotle and hegel and his apparently eccentric desire to place the semiotic philosophy of c s pierce at center stage but the patient observer will see that he is not seeking to change the facts by imposing idealist notions on them after the event instead he is arguing for a change in the way we perform ourselves in the face of these facts he is looking for a modern day equivalent of confucius or socrates one who can imagine values and beliefs that òdefine the human species in a new way Ó for those who have eyes to see as the drama unfolds it may be that we have found such a figure in carsten herrmann pillath himself modesty ambition and all this is òcultural scienceÓ as it should be done Ò Ð john hartley curtin university australia and cardiff university uk
